

Sustainable Packaging Policy

In Walmart de México y Centroamérica, one of our sustainability strategic pillars is to foster a circular economy. Our commitment to our customers is to provide them the certainty that, when buying a product in our stores, it will have characteristics that enables it to reduce its environmental impact.

This policy covers all our Private Brand products, as well as our suppliers and business partners in the manufacture of said products.

Walmart de México y Centroamérica is committed to:

- Recognize the contribution that single-use plastics have in the generation of environmental pollution and their material footprint.
- By 2025, all of our Private Brand products have packaging 100% recyclable, reusable or compostable; avoid the use of unnecessary or difficult-to-recycle plastic and include 20% of post-consumer recycled material.
- Periodically evaluate the packaging situation of our Private Brand products, regarding their characteristics and their environmental impact, through Life Cycle Analysis, among other tools.
- Preferentially source of packaging that have reusable, recyclable, recycled content, compostable or biodegradable characteristics, as well as to promote the certification of said characteristics.
- For products that do not have characteristics of this nature in their first evaluation, we are committed to establish together with our business partners, objectives and commitment dates for the incorporation of any of these characteristics that allow a lower environmental impact. The progress will be reported annually.
- Implement monitoring, control and reporting systems on the contents of the packaging volumes used for the consumption of our Private Brands.

- Inform and sensitize our customers and associates about the sustainability of our Private Brand's packaging, in order to communicate adequately their environmental impact.

In 2021, we will conduct a sustainability and impact assessment of our Private Brand's packaging. During 2022, we will establish agreements and commitments with our business partners to apply the Sustainable Packaging Policy. From 2023 and ongoing, we will measure our progress and work closely with suppliers and business partners to ensure that the estimated impacts are corresponding to the materials used.
